ABSTRACT

2

3 A baggage carousel including an attachment member
4 movable about a continuous circuit and a conveyor panel
5 coupled to the attachment member. The conveyor panel
6 includes a base plate, an indicia plate, and a bumper layer
7 carried therebetween. The base plate has a leading edge, a
8 trailing edge, a top edge, a bottom edge, and an upper
9 surface. A groove line extends from the leading edge
10 toward the trailing edge, spaced a distance from the bottom
11 edge. The indicia plate includes a protective cover
12 overlying an indicia sheet, and is carried on the upper
13 surface of the base plate aligned along the groove line.
